

## **INDICATIONS**

The ROTIUM® RCO Bioresorbable Wick is intended to be used in conjunction with suture anchors for the reattachment of tendon to bone in rotator cuff repairs.

## **PRODUCT DESCRIPTION**

The ROTIUM RCO Bioresorbable Wick is an accessory to be used in conjunction with suture anchors for rotator cuff repair (see the Tables included at the end of this document). The ROTIUM RCO wick is placed over the tendon and is designed to facilitate tendon-bone reattachment. The ROTIUM RCO wick is an electrospun, non-woven, microporous, microfiber matrix. It is made from two types of polymer fibers: Poly(lactide-co-caprolactone) (PLCL) and Polyglycolic acid (PGA). The device is supplied gamma-sterilized. The device is single use only. The ROTIUM wick is provided in the following sizes:

Reference #	Size
FG-1023	2cm x 2cm
FG-1043	4cm x 3cm

## **CONTRAINDICATIONS**

- The ROTIUM RCO wick is not indicated for surgical procedures other than those listed in the INDICATIONS section.
- The ROTIUM RCO wick is not indicated to be used without orthopedic suture anchors in surgical rotator cuff repair.
- The ROTIUM RCO wick is not indicated for use in the presence of infection.
- The ROTIUM RCO wick is not indicated for use in patient conditions including insufficient quantity and/or quality of bone or soft tissue.
- The ROTIUM RCO wick is not indicated for use in patient conditions where insufficient blood supply or previous infections may hinder the healing process.
- The ROTIUM RCO wick is not indicated for use in the presence of foreign body sensitivity. If material sensitivity is suspected, testing should be completed prior to device implantation.
- The ROTIUM RCO wick is not indicated for use in conditions which may limit the patient's ability or willingness to follow postoperative care instructions.
- The ROTIUM RCO wick is not indicated to replace damaged tendon.

## **WARNINGS**

- The ROTIUM RCO wick should only be used in the intended applications. Use of the device outside of the intended application may result in unforeseen adverse effects and complications.
- A surgeon should not begin clinical use of the device without reviewing the instructions for use.
- Additional precautions include those applicable to any surgical procedure. Careful attention must be devoted to avoiding all surgical hazards (but not limited to) infection, neurovascular damage, excessive tourniquet time, thermal/frictional trauma to cutaneous structures, improper implant position, and inappropriate implant deployment.
- Compatibility of the device has only been verified with size #2 sutures and tape-style sutures composed of UHMWPE.
- Do not place more than two holes in a single ROTIUM RCO wick.

## **WARNINGS Cont.**

- Avoid any permanent crushing and deformation of the ROTIUM RCO wick during entry and advancement through arthroscopic cannulas. Do not attempt to pass the device through arthroscopic cannulas of less than 6mm inner diameter.
- Sharp instruments or rough handling can result in damage to the ROTIUM RCO wick.
- The ROTIUM RCO wick should not remain folded over itself or rolled up when placement is complete.

## **PRECAUTIONS**

- Do not trim the device.
- Proper placement of the ROTIUM RCO wick is a critical determinant of successful outcomes with this device.
- Do not use the ROTIUM RCO wick if the packaging is damaged or if the seal on the packaging is broken prior to use.
- The ROTIUM RCO wick is supplied sterile. This packaging will serve as an effective barrier against contamination until the printed expiration date. Do not use after the expiration date.
- The ROTIUM RCO wick is single use only. It should not be re-packaged or re-sterilized. Re-packaging or re-sterilization may result in damage to the device, device failure, reduced biocompatibility, and complications such as infection. Unused portions of the ROTIUM RCO wick should be discarded.
- Do not use the ROTIUM RCO wick if aseptic technique has not been followed throughout the handling of the device.

## **ADVERSE REACTIONS**

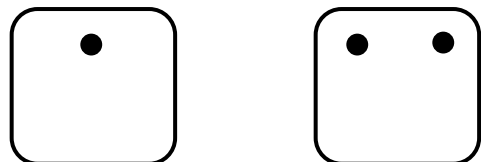

- Infections, both deep and superficial.
- Allergies and other reactions to device materials.

## **INSTRUCTIONS**

- See Tables 1, 2, 3, and 4 to verify compatibility with the ROTIUM RCO Bioresorbable Wick.

### **Preparation:**

- Prepare the ROTIUM RCO wick implantation site using standard surgical technique. Following anchor placement, sutures should be passed through the tendon and retrieved out of a cannula.
- Always use aseptic techniques when handling the ROTIUM RCO wick.
- Remove the ROTIUM RCO wick from its packaging and place it on a sterile surface.
- The ROTIUM RCO wick is supplied in a nested pouch configuration. The inner foil pouch is sterile, and may be placed on the sterile field.
- Make a small hole or incision in the ROTIUM RCO wick to allow for the suture passage.
  - Holes should be placed no closer than 3mm from any edge of the device. Example hole placements are given below:

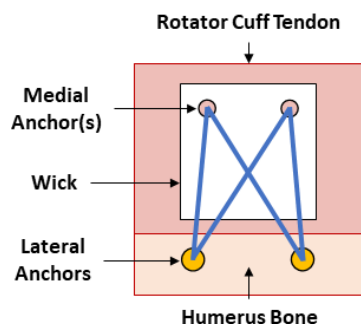

- A sharp blade, scissors, or suture passing device may be used to create the suture hole, an example is illustrated below:

### Application:

- Pass the desired suture limbs through the hole produced in the ROTIUM RCO wick.
- Advance the ROTIUM RCO wick down the suture limbs until the device is in contact with the **tendon surface**.
  - The device may be rolled into a cylinder to facilitate passage through the cannula.
  - **WARNING:** Avoid any permanent crushing and deformation of the ROTIUM RCO wick during entry and advancement through arthroscopic cannulas. Do not attempt to pass the device through arthroscopic cannulas of less than 6mm inner diameter.
- If the ROTIUM RCO Wick is not lying flat on the **tendon surface**, gently use a blunt instrument (e.g. surgical probe or suture retriever) to manipulate the device.
  - **WARNING:** Sharp instruments or rough handling can result in damage to the ROTIUM RCO wick.
  - **WARNING:** The ROTIUM RCO wick should not remain folded over itself or rolled up when placement is complete.
- Once the Rotium RCO wick is placed over the tendon, secure the device in place by using the suture strand(s) to complete the rotator cuff repair, such that the suture strand(s) are secured over the top of the device. An example of a suture pattern over the device is provided below:

### SYMBOLS

- LOT** Lot Number
- REF** Reference Number
- Manufacturer Information
- Date of Manufacture
- Maximum Storage Temperature
- R<sub>x</sub> Only** Caution: US Federal Law restricts the sale, distribution, or use of this device to, by, or on the order of a physician.
- Do Not Re-sterilize
- Single Use Only
- Do Not Use if Package is Damaged or Crushed
- Use By Date
- STERILE R** Sterilized via irradiation
- Refer to Instructions for Use Before Use

### STERILITY

The ROTIUM RCO Bioresorbable Wick is supplied gamma-sterilized.

### STORAGE AND HANDLING

The ROTIUM RCO Bioresorbable Wick must be stored in its original packaging, preferably in a cool and dry place (30°C max). Dispose of packaging and unused ROTIUM RCO wick materials following normal waste disposal procedures.

### CUSTOMER SUPPORT

For product complaints and potential adverse events, please contact your local Sales Representative or Customer Support.
